SAFE PEST DEFENCE

PEST
CONTROL
THE EASY AND
POISON-FREE
WAY

SafeTrapAutomatic 25
Safebox[®]/Safebox[®] Public

Light and scent encourage the natural behaviour of mice and rats to investigate the trap

The transparent top lets light through the trap and ventilation in the top ensures that the bait's scent penetrates the surroundings, encouraging the desire to investigate.

Built-in NFC technology

The Near Field Communication counter (NFC) is read by a smartphone (iOS or Android). It counts and records the number of shots, date and time. It collects weather data from the nearest valid weather station. New functionalities are constantly being developed.

IP rights: Patent pending

Data collection via the App

The App is available on Google Play and in the App store. The mobile phone's GPS automatically detects the location of the trap. Open data source – The information from the App can be downloaded into your own Service Management System. Online IoT solution under development together with a 25 g CO₂ cartridge delivers up to 40 shots (only professional pest controllers).

The attractants are customised

The attractants can be adapted to the natural food sources of the mice and rats in the area, or CAMRO have a wide range of attractants ready for use.

The attractant is put into the supplied lure basket.

This is how SafeTrapAutomatic 25 works

Mice and rats are killed quickly, efficiently, and humanely using a gas-powered piston and with no poison.

Dead mice or rats automatically fall out of the trap, after which predators can easily take them, or they can be removed.

UN Global Goals

SafeTrapAutomatic 25 from Camro complies with up to 10 of the 17 Global Goals from the UN.

SKU 420102

STA Safebox is recommended for rural and industrial areas, as well as places where predators have access.

STA Safebox Public is recommended in urban areas and other places where dead animals are to be hidden.
